

Before you start

Closed testing has not started yet. Wait for the organiser to add your email and send the closed-test invitation. The existing internal-test invitation does not count towards this test.

You need: an Android phone, internet access and a Google account used in Google Play. You do not need programming skills. An iPhone cannot run this Android test.

1. Find your Google account email. Open Google Play Store. Tap your profile picture at the top right. Read the email beneath your name. If you have several accounts, choose the one you will use for testing.

2. Send only that email to the organiser. Agree to be included in the tester list. Never send a password, login code or backup code.

Why is the app not searchable? It is a private test release. Invited testers can access it using an invitation link, even before it is available to everyone. Searching Google Play does not join the test.

1. Your Google account email

2. Organiser adds you to the list

3. You receive the closed-test link

Illustrated sequence, not a screenshot of Google Play.

Join and install

- 1. Wait for confirmation.** The organiser must first add your email and make the closed test available.
- 2. Open the invitation in Chrome.** Use your Android phone. Check that the invitation page is signed in to the same Google account you supplied.
- 3. Read the invitation and join.** Tap the join button. Depending on the screen, it may say "Become a tester", "Join the test" or "Accept invite".
- 4. Open its Google Play download link.** After joining, follow "Download it on Google Play", or the Play download link supplied by the organiser.
- 5. Install and open.** On the Play page, check the app and developer details supplied by the organiser. Tap "Install". Wait for the download, then tap "Open".

Already installed an APK? If Play reports a conflict, contact the organiser. Do not delete your saved data just to troubleshoot.

No private invitation yet? You can read the website and add it to your home screen, but that does not enrol you in Google Play closed testing.

Invitation accepted > Google Play > Install > Open

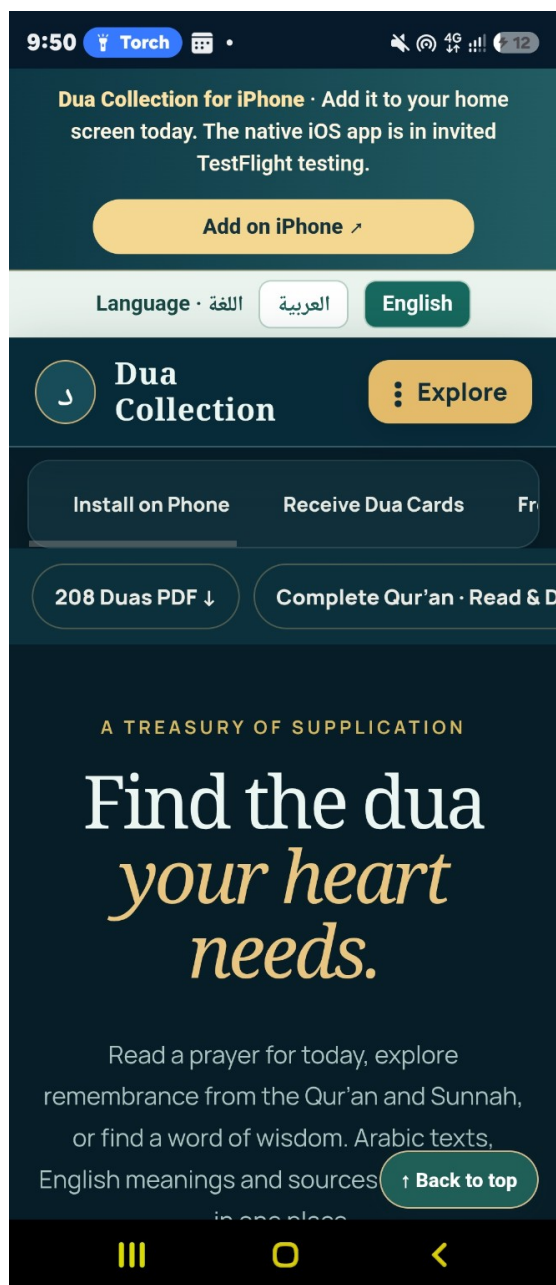

Use the same Google account throughout these steps.

Android testing - step-by-step guide

What to try in the app

These are actual Android screenshots supplied by the organiser. Try reading, changing language, browsing subjects, saving, sharing and downloading.

Home page - explore collections

Arabic card - read and share

Check that Arabic text is complete and readable. Try English, WhatsApp sharing and opening a downloaded PDF. Share only with someone who agrees to receive your message.

Stay enrolled and send feedback

For at least 14 continuous days: remain enrolled in the closed test. Do not select "Leave the programme". If you leave and rejoin, your own continuous period starts again.

Use the app regularly. A suggested session is 3-5 minutes on most days. This is a practical suggestion, not a mandatory daily time specified by Google. Test different features and report genuine issues.

Not eligible / app unavailable: confirm that your email was added and that Chrome and Google Play use the same account. Ask the organiser to confirm the test release is available.

Download problem: check your internet connection, free storage and Google Play updates. For an app error, describe what you tapped and what happened.

Send a useful report:

Phone model:

Android version:

What I tried:

What happened:

What I expected:

Screenshot, if helpful. Hide private notifications and personal information.

When is the test complete? Google requires at least 12 testers enrolled continuously for the preceding 14 days before the developer can apply for public-release access. Approval is not automatic. Remain enrolled until the organiser confirms the test is complete.
